2. The following is an examiner's statement of reasons for allowance: The closest prior art, Daub and Greenberger, teach a method of managing coils being fed into a continuous inline processing plant as applied in previous rejections however the prior art as a whole fails to teach the claimed method as a whole. Specifically, such as in Daub and Greenberger, the intermediate accumulator is fed from the inlet section in order to complete to two separate junctions between three different coils. The claimed method requires that the same junction is temporarily joined by welding in the first portion of the inlet section, fed through the intermediate accumulator, and subsequently welded in the second portion of the inlet section after the intermediate accumulator. Such is not taught or obvious in view of the prior art as a whole.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
